

*Dear reader, Greetings*

In this motivation letter, I want to explain why I think I'm a good fit for your Front- and Backend Coding internship position.

I'm a game design student in Berlin who mostly develops video games and 3D projects with unity game engine. Even though I started my studies in Berlin on March of 2024, my experience with the game engine dates to 2021, when I started developing indie projects.

With that mentioned, I know how to work inside in a team and I'm not necessarily a solo developer. I have basic knowledge of Git and repositories, which is very useful when you want to work on the same project with other teammates.

Furthermore, my advanced C# programming and unity skills are demonstrated in my published projects. You can find information about my released projects in my portfolio or you can play them online on my itch developer account.

I heard nice things about your company from other students who had completed their internships at your company and I'm interested to do my internship at your company.

Looking forward to hearing back from you with some positive results.

**My thanks.**

*Shervin Shafizad*
